REOVIB RTS System Expansion module

IP 00, cabinet mounting version

Unique Selling Point

- Cost-effective phase-angle control systems with protection class IP00 for installation in a control cabinet
- Can be used as a standalone device or in a modular design for several outputs
- Output current up to 6A
- Fill level/overflow control
- Mains voltage compensation with constant vibration amplitude
- Adjustable soft start ramp time

Description

RTS SYSTEM expansion module in open design for assembly on a DIN rail. The expansion module has an output channel max. 6A with fill level/overflow control and mains voltage compensation and can be set up together with the basic module and several expansion modules.

Typical applications

- Conveyor & assembly automation
- Conveyor technology
- Sieving technology

Technical Data

- Output voltage : 20...100 / 40...210 V
- Output Current : max. 6 A
